

Sustainable Stand Design Overview

How reuse, materials and logistics reduce the footprint of your presence.

Design for reuse

Modular structures are engineered to be rebuilt show after show.

Custom builds are designed so key elements return to stock.

Materials

FSC-certified timber, recyclable panels and low-VOC finishes.

Aluminium systems with long service lives instead of single-use board.

Waste and logistics

Segregated waste streams during build-up and breakdown.

Consolidated transport planning to reduce vehicle movements.

Keep asking

Ask where your stand goes after the show - the answer matters.
